

On-Site Cancer Screening

Early Detection Saves Lives

Early Detection Saves Lives

Screen4Life is a leading cancer screening specialist dedicated to the prevention and early detection of certain cancers.

We specialise in offering a high quality cancer screening service to Britain's biggest companies and professional sports organisations.

Skin cancer exposed

In the UK, 37 people are diagnosed with melanoma every day. When treated early it can usually be cured, but the disease still claims tens of thousands of lives every year throughout the world. According to the World Health Organisation, skin cancer accounts for one in every three cancers diagnosed worldwide, with global incidence on the rise. In the UK one in every 10 skin cancers are diagnosed in the "late" stage, and it can take weeks for patients to see a dermatologist.

Early detection through proactive screening will help to greatly reduce late stage melanoma.

Skin Cancer is a "recreational cancer" caused by too much sun. Sunburn can double the risk of skin cancer. Lots of sun over your lifetime also increases your risk of certain skin cancers. There are now more deaths from skin cancer in the UK than in Australia.

With rates set to treble in the next 30 years, it's never been more important to protect our skin from the sun's harmful Ultraviolet (UV) rays.

Melanoma

The most dangerous skin cancer has increased 43% in 10 years (Source: Cancer Research UK). Anyone can get melanoma. The risk usually goes up with age. People with light-coloured hair, eyes and skin have a higher risk than people with darker colouring.

People with a family history of melanoma also have a higher risk. With melanoma it's essential that it is detected early. If you have any concerns about a mole, we recommend you speak to your GP as soon as possible.

About Screen4Life

Screen4Life is a leading provider of specialist screening services to the Corporate sector. The company was established in 2006 to fill a gap in the market for a proactive cancer screening service delivered on-site, using simple, non invasive tests delivered by a qualified nurse.

Employee health & wellbeing

1 in 3 people will develop cancer in their lifetime. Early detection through screening is a potential lifesaver and a valuable employee benefit.

When cancer is diagnosed at an early stage, treatment is often more likely to be effective resulting in faster and less expensive treatment. This may be instrumental in reducing future costs of private medical insurance, income protection insurance and life assurance for employees.

Private health insurance / cash plans

Private Health insurance and in particular CASH PLANS can allow up to 100% of the total cost of annual screening to be claimed back. In many cases, this is one of the most underused allowances in a policy, often because of the cost. Cancer screening can cost less than £100 per person, so you could have no out-of-pocket expense at all. You might be able to get the full cost of the screens up to £200 reimbursed.

Cash-back plans are an underused and underutilised benefit. For very little money per week it is possible to get help with, for example, dental bills or new glasses. An increasing number of cash back plans offer reimbursement on 'screening services' and for some of these plans Screen4Life services may get covered. Always check with the cash-back plan provider before ordering a Screen4Life service.

If your company provides Cash-back plans to staff, please consider checking if they will cover life saving services such as cancer checks.

Screening Services

Skin cancer screenings

£110 per person or £1,930 for a full corporate day*

This normally takes about 25 minutes with one of our experienced dermatology nurses. She will check your body using a dermatoscope initially, and where appropriate she will use specialist non invasive digital imaging technology called SIAscopy which enables her to see 2mm below the surface of the mole or lesion. The results are immediate and an output of the SIAscopic scan can be produced in to a personalised report for suspicious lesions.

If there is nothing suspicious this will be confirmed at the time of screening, however, depending on the personal risk factors there may be recommendation to have moles scanned periodically.

If something appears to warrant further attention your report will be forwarded to our doctor and specialist for review. Depending on his assessment, you will be advised if any further action is necessary. If required, we will forward your scan results to your GP and/or referral to a specialist.

Bladder cancer screenings

£50 per person*

A simple urine sample test with immediate results given to the employee at the appointment.

Bowel cancer screening

£50 per person*

A take at home Faecal Occult Blood Test or FOBT kit is sent to your home address. The tiny samples are then sent off in a stamped address envelope for analysis by our nurse. Results are normally provided within 3 days.

Prostate cancer screening

£50 per person*

A simple finger prick blood test, Prostate-Specific Antigen or PSA Test, with immediate results given to the employee at the appointment.

*All our screening services are VAT exempt

Screening Services

How on-site cancer screening works

Our Cancer screens are delivered on the company's premises using a private room therefore the employee spends as little time as possible away from their desk. Screen4Life can manage the whole appointment process for you using our personalised booking system.

Who pays?

Screen4Life offers screening to employees on a self-pay or company-paid/subsidised basis. Many of our clients now fully subsidise the cost of cancer screening for their employees as it is seen as an important, and valuable employee benefit.

Where employees meet the cost of health screening, there can often be significant cost savings tax savings available if they have a Cash Plan policy.

Rapid referral to a skin specialist

At the heart of Screen4Life's service is our unique skin imaging technology called SIAscopy which is non invasive, painless and harmless. It also enables the nurse to create a PDF report for our Dr and specialist, and you would normally receive his recommendations within 3 working days.
